

1. Asia's Remarkable Economic Transformation

Context:

- ▶▶ Two centuries ago, in 1820, Asia accounted for two-thirds of the world's population and more than a half of world income. It also contributed more than a half of manufacturing production in the world economy.

Historical Perspective:

- ▶▶ The subsequent decline of Asia was attributable to its integration with the world economy shaped by colonialism and driven by imperialism. By 1962, its share in world income had plummeted to 15%, while its share in world manufacturing had dropped to 6%.
- ▶▶ Even in 1970, Asia was the poorest continent. Its demographic and social indicators of development, among the worst anywhere, epitomised its underdevelopment.

Overcome the Undergrowth:

- ▶▶ In the half century since then, Asia has witnessed a profound transformation in terms of economic progress of nations and living conditions of people. By 2016, it accounted for 30% of world income, 40% of world manufacturing, and over a third of world trade.
- ▶▶ Its income per capita also converged towards the world average. Asia's economic transformation in this short time span is almost unprecedented in history.

Diversity of Asia:

- ▶▶ It is essential to recognise the diversity of Asia. There were marked differences between countries in geographical size, embedded histories, colonial legacies, nationalist movements, initial conditions, natural resource endowments, population size, income levels and political systems. The reliance on markets and degree of openness in economies varied greatly across countries and over time. The politics too ranged widely from authoritarian regimes or oligarchies to political democracies. So did ideologies, from communism to state capitalism and capitalism.
- ▶▶ Development outcomes differed across space and over time. There were different paths to development, because there were no universal solutions, magic wands, or silver bullets. Despite such diversity, there are common discernible patterns.

Factors of Growth:

- ▶▶ For Asian countries, political independence, which restored their economic autonomy and enabled them to pursue their national development objectives, motivated and drove this transformation.

- ▶▶ Unlike Latin America and Africa, most Asian countries did have a long history of well-structured states and cultures, which were not entirely destroyed by colonialism.
- ▶▶ Economic growth drove development. Growth rates of GDP and GDP per capita in Asia were stunning and far higher than elsewhere in the world. Rising investment and savings rates combined with the spread of education were the underlying factors.
- ▶▶ **Growth was driven by Rapid Industrialisation, often export-led.** There was a virtuous circle of cumulative causation, wherever rapid investment growth coincided in time with rapid export growth, leading to rapid GDP growth.
- ▶▶ This was associated with structural changes in the composition of output and employment. The process was also supported by a coordination of economic policies across sectors and over time.

Unequal Outcomes:

- ▶▶ However, development outcomes were unequal across sub-regions and countries. East Asia was the leader and South Asia was the laggard, with Southeast Asia in the middle, while progress in West Asia did not match its high-income levels.
- ▶▶ **In just 50 years, South Korea, Taiwan and Singapore joined the league of industrialised nations.** China was a star performer throughout, making impressive strides in development after 1990. The economic dynamism of Indonesia, Malaysia, and Thailand waned after the Asian financial crisis. The growth performance of India, Bangladesh and Vietnam was most impressive during the past quarter century, although India and Bangladesh did not match the rest of Asia in social progress. Rising per capita incomes transformed social indicators of development, as literacy rates and life expectancy rose everywhere. Rapid economic growth led to a massive reduction in absolute poverty. But the scale of absolute poverty that persists, despite unprecedented growth, is just as striking as the sharp reduction therein.
- ▶▶ The poverty reduction could have been much greater but for the rising inequality. Inequality between people within countries rose almost everywhere, while the gap between the richest and poorest countries in Asia remains awesome.

Government's Role:

- ▶▶ **Governments performed a vital role, ranging from leader to catalyst or supporter,** in the half-century economic transformation of Asia, while their willingness and ability to do so depended on the nature of the state, which in turn was shaped by politics.

- ▶▶ Success at development in Asia was about managing this evolving relationship between states and markets, complements rather than substitutes, by finding the right balance in their respective roles that also changed over time.
- ▶▶ The developmental states in South Korea, Taiwan and Singapore coordinated policies across sectors over time in pursuit of national development objectives, using carrot and stick to implement their agenda, and were able to become industrialised nations in such a short time span.
- ▶▶ It is not possible to replicate these states elsewhere in Asia. In some of these countries, the institutionalised checks-and-balances of political democracies were crucial to making governments more development-oriented and people-friendly.

Openness, Industrialisation:

- ▶▶ Economic openness performed a critical supportive role in Asian development. While openness was necessary for successful industrialisation, it was not sufficient.
- ▶▶ Openness facilitated industrialisation only when combined with industrial policy. Clearly, success at industrialisation in Asia was driven by sensible industrial policy that was implemented by effective governments.

Challenges Ahead:

- ▶▶ **Asia represents the beginnings of a shift in the balance of economic power in the world** and some erosion in the political hegemony of the West.
- ▶▶ The future will be shaped partly by how Asia exploits the opportunities and meets the challenges and partly by how the present difficult economic and political conjuncture in the world unfolds.
- ▶▶ In terms of per capita income, however, it will be nowhere near as rich as the United States or Europe. Thus, Asian countries would emerge as world powers, without the income levels of rich countries.
