

4. Oil Seeds Production

Prelims Level: Agriculture Ignorance subsidy Marketing

Mains Level: GS-III Major crops cropping patterns in various parts of the country, different types of irrigation and irrigation systems storage, transport and marketing of agricultural produce and issues and related constraints; e-technology in the aid of Farmers.

Why in News?

- Country needs 25 million tonnes of edible oils to meet its requirement at current consumption level of 19 kg per person per year.
- Out of the total requirement, 10.50 million tonnes are produced domestically from primary (Soybean, Rapeseed & Mustard, Groundnut, Sunflower, Safflower & Niger) and secondary sources (Oil palm, Coconut, Rice Bran, Cotton seeds & Tree Borne Oilseeds) and remaining 60%, is met through import. The oilseed production of the country has been growing impressively.
- Despite this, there exists a gap between the demand and supply of oilseeds, which has necessitated sizeable quantities of imports.

Challenges:

• The major challenges in oilseed production is largely rain-fed conditions (70% area), high seed cost (Groundnut and Soybean), small holding with limited resources, low seed replacement rate and low productivity.

GATEWAY

Govt. Intervention:

- To increase domestic availability and reduce import dependency, a National Mission on Edible Oils (NMEO) is proposed for next five years (2020-21 to 2024-25).
- NMEO covering three Sub-Missions to increase production of oilseeds and edible oils from
 - ✓ Primary Sources (Annual Crops, Plantation Crops and Edible TBOs)
 - ✓ Secondary Sources (Rice bran oil and Cotton seed oil)
 - ✓ Consumer Awareness for maintaining edible oil consumption constant at 19.00 kg per person per annum.
- The proposed mission will aim to increase production from 30.88 to 47.80 million tonnes of oilseeds which will produce 7.00 to 11.00 million tonnes of edible oils from Primary Sources by 2024-25. Similarly, edible oils from secondary sources will be doubled from 3.50 to 7.00 million tonnes.

Action Points to Increase Production:

- The following action point will be initiated for increasing production and productivity of oilseeds and promotion of Secondary Sources of Edible oils:
 - ✓ Increasing seed replacement rate and varietal replacement rate
 - ✓ Promotion of oilseed in rice fallow/ potato areas
 - ✓ Promotion of oilseeds through intercropping
 - ✓ Extending oilseed cultivation in non-traditional area
 - ✓ Targeting 100 low productivity districts
 - ✓ Crop diversification in different reasons
 - ✓ Promotion of community-based oil Extraction Unit
 - ✓ Value addition and promotion of Export
 - ✓ Promotion of rice bran and cotton seed oil
 - $\checkmark~$ Consumer awareness for judicious consumption of oils for good health
- The above strategies will deliberate the following output by the end of 2024-25:
 - ✓ Oilseed production will be increased from 30.88 to 47.80 million tonnes
 - ✓ Productivity will be increase from 1263 to 1587 kg per ha
 - ✓ Reduction in import dependence from 60% to 45%
 - ✓ Edible oil production will be 18.00 Million Tonne from 10.50 Million Tonnes.
